Cardiovascular Condition Coding for Medicare-Based Hierarchical Condition Categories (HCC's)

Cerebral infarction/stroke/cerebrovascular accident (CVA) are terms which are often used interchangeably to refer to a cerebral infarction.

Past myocardial infarction diagnosed on ECG (EKG) or other special investigation, but currently presenting no symptoms.

This supplemental form was created to be used in conjunction with your normal superbill to better identify patients with chronic diseases. Use this reference sheet to increase diagnosis specificity of chronic conditions that affect your clinical decision making and plan of care. Please remember that documentation in your clinical record must support the billed diagnosis codes.
